临床药理学室

## BACKGROUND

Epidemiology and characteristics of antimicrobial resistance in China

Yong-Hong Xiao<sup>a,\*</sup>, Christian G. Giske<sup>b</sup>, Ze-Qing Wei<sup>c</sup>, Ping Shen<sup>a</sup>, Andreas Heddini<sup>c</sup>, Lan-Juan Li<sup>a</sup>

Antimicrobial resistance in China has become a serious healthcare problem, with high resistance rates of most common bacteria to clinically important antimicrobial agents. Methicillin-resistant *S. aureus*, ESBL-producing Enterobacteriaceae and carbapenem-resistant *Acinetobacter baumannii* represent **more than 50% of microbial isolates**.

- MRSA
- VRE
- VRSA

- ✓ 万古霉素 **vancomycin**
- ✓ 利奈唑胺 **linezolid**

## Linezolid

oxazolidinone antibiotics

- 2000 FDA
- 2007 SFDA

unique mechanism of the antibacterial action

- inhibition of protein synthesis in bacterial liposomes

approved indications for linezolid use

- vancomycin-resistant Enterococcus infection and comorbid with bacteremia
- hospital-acquired pneumonia
- complicated skin and skin structure infections
- community-acquired pneumonia and comorbid with bacteremia
- uncomplicated skin and soft tissue infections

superiority

- all ages
- liver disease
- poor kidney function
- with or without bacterial invasion of the bloodstream

Efficacy of linezolid on HAP and VAP caused by MRSA is better than vancomycin

ATS/IDSA. Am J Respir Crit Care Med. 2005;171:388-416.  
ATS/IDSA(2005) guidelines for the management of adults with HAP/VAP/HCAP

## 血小板减少症

—来自临床的声音

安全性&耐受性

上市前临床试验

—说明书

- 腹泻/头痛/恶心/呕吐/味觉异常
- 骨髓抑制
- 血小板减少 2.4% (0.3%-10.0%)
- 白细胞减少/贫血/全血细胞减少
- 乳酸酸中毒
- 视神经病变
- 周围神经病变

上市后监测

—文献

- 主要的SAE是血小板减少
- 其他国家 高发生率 (15.1-38.7%)
- 中国 个案报道 没有大样本人群的发生率

## 研究目的

住院患者使用利奈唑胺致相关血小板减少

- ? 临床实际发生率及严重程度
- ? 危险因素
- ? 风险特征的预测指标

## 资料&方法

回顾性研究

数据来源

- 解放军总医院 (4,000 beds)
- 使用利奈唑胺口服/静注/序贯
- 电子医疗记录

血小板减少症评价

254 were included in the analysis

512 Patients were screened

-7 Patients were excluded due to younger than 18 years old

505

85 were excluded due to diagnosis and drugs

- Hematological disorders
- Chemotherapy on tumor
- Severe pancreatitis
- Hepatoblastoma
- Systemic Lupus Erythematosis
- antiplatelet agent

425 were eligible and consented

171 were excluded due to platelet count

- baseline platelet anomalies (less than  $100 \times 10^9/L$  or more than  $400 \times 10^9/L$ )
- initial platelets were not recorded or less than three platelet observation points

## 资料&方法

### Thrombocytopenia in this study -lack of uniform diagnostic criteria

标准 1——严重

platelet count less than  $100 \times 10^9/L$

标准 2——轻中度

25% reduction from baseline platelet count or less than  $100 \times 10^9/L$

### Variables

- ✓ Gender
- ✓ Age
- ✓ Body weight
- ✓ Daily dose (mg/kg)
- ✓ duration of linezolid administration
- ✓ laboratory data (5 factors)
  - Alanine aminotransferase
  - Total bilirubin
  - Creatinine
  - Albumin
  - Baseline platelet

## 结果

### 研究对象概况

- 169 男性 /85 女性
- 平均年龄 59.0 ± 17.7 (range 18-95) 岁
- 平均用药时间 9.43 ± 5.63 (range 2-35.5) 天

### 血小板减少发生率

- 标准 1	69/254	<b>27.2%</b>
- 标准 2	131/254	<b>51.6%</b>
- III & IV 度血小板下降	27/254	<b>10.6%</b>
- 输血或输注血小板	17/254	<b>6.7%</b>

WHO assessment of acute and subacute adverse performance and indexing standards  
grade III, 26-49 × 10<sup>9</sup> / L  
grade IV, ≤ 25 × 10<sup>9</sup> / L

## 血小板下降常见

Country	Number	Incidence	Criterion	Author
USA	19	32%	platelet count less than $100 \times 10^9/L$	Attassi et al
USA	48	48%	30% reduction	Orrick et al
		19%	platelet count less than $100 \times 10^9/L$	
Janpan	42	16.7%	defined as a $100 \times 10^9/L$ decrease from the baseline or a 25% reduction	Niwa et al
Janpan	331	38.7%	defined as a $100 \times 10^9/L$ decrease from the baseline or a 30% reduction	Yoshiko takahashi et al
Chinese	254	27.2%	platelet count less than $100 \times 10^9/L$	this study
		51.6%	defined as a $100 \times 10^9/L$ decrease from the baseline or a 25% reduction	

- 结果与国外文献报道相近
- 显著高于产品资料所报道的III期临床研究结果
- 轻中度血小板下降很常见 ( ) 10%)
- 存在出血倾向

## 结果 ——差异性分析

### Risk factors Analysis of Thrombocytopenia Criterion 1

Variables	a final platelet count ( $100 \times 10^9/L$ )		P value
	Patients with thrombocytopenia (n=69)	Patients without thrombocytopenia (n=185)	
Gender(male)	44(63.77%)	125(67.57%)	0.5681+
Age(years)	63.49(15.97)	57.45(18.06)	0.0152#
Weight(kg)	61.70(13.18)	65.75(13.06)	0.0294#
Alanine aminotransferase(U/L)	30.24(27.55)	35.79(47.27)	0.3084*
Total bilirubin(umol/L)	18.01(17.52)	17.76(27.30)	0.3803*
Creatinine clearance(mL/min)	84.37(63.12)	102.07(57.26)	0.0087*
Albumin(g/L)	31.34(5.27)	33.84(8.79)	0.0051*
Daily dose(mg/kg)	20.11(4.14)	18.46(4.44)	0.0016*
Baseline platelet( $\times 10^9/L$ )	176.96(61.97)	234.14(73.68)	<b>(0.0001)*</b>
Treatment duration(d)	10.52(5.01)	9.02(5.83)	0.0067*

+ chi-square test # t-test \* Mann-Whitney U-test

Criterion 2

Criterion 1

## 结果 一多因素分析

Risk factors for thrombocytopenia selected by logistic regression

Risk factors	Multivariate Analysis					
	25% decrease or a final platelet count ( $100 \times 10^9/L$ )			a final platelet count ( $100 \times 10^9/L$ )		
	Odds ratio	95%CI	P value	Odds ratio	95%CI	P value
Creatinine clearance(mL/min)	0.995	0.990-1.000	0.0351			
Albumin(g/L)	0.949	0.904-0.996	0.0323			
Daily dose(mg/kg)	1.12	1.047-1.198	0.0010	1.081	1.007-1.161	0.0308
Baseline platelet( $\times 10^9/L$ )				0.987	0.982-0.992	0.0001
Treatment duration(d)				1.061	1.005-1.120	0.0317

↓ **Criterion 2**
↓ **Criterion 1**

## 结果 一 ROC 曲线

Clinical features of thrombocytopenia predicated by ROC curves

**Criterion 1**  
 -Youden index : 0.4306  
 -area under ROC curve: 0.757  
 -baseline platelet value :  $181 \times 10^9/L$   
 -daily dose: 18.75 mg/kg/d  
 -duration of medication : 10 d

PLTs  $200 \times 10^9/L$   
 Ccr  $\leq 30$  mL/min  
 Ccr  $\leq 50$  mL/min  
 duration  $\geq 14$  d

**Criterion 2**  
 -Youden index : 0.3703  
 -area under ROC curve: 0.706  
 -creatinine clearance : 88.39 mL/min  
 -serum albumin : 33.5 g/L  
 -daily dose: 18.46 mg/kg/d

## 每日剂量

independent risk factor for mild&severe PLT decrease

- risk increase
    - daily dose  $\geq 18.75$  mg/kg/d
    - body weight  $\leq 64$ kg
  - a protective factor of thrombocytopenia : body weight
  - higher drug exposure induced thrombocytopenia
- 
- linezolid-related thrombocytopenia is characterized as **drug concentration-dependent**
  - **dosage adjustment according to body weight** may help to reduce the risk of linezolid-related thrombocytopenia in Chinese population

## 基线血小板

independent risk factor for severe thrombocytopenia

- baseline platelet  $\leq 181 \times 10^9/L$  are more likely to suffer from thrombocytopenia than others (45.9% [39/85] vs. 17.8% [30/169],  $P < 0.001$ )
  - **OR=3.93**, 95%CI 2.24-6.90
  - **N=254**
- 
- Grau et al. show that thrombocytopenia is more likely to occur in patients with baseline platelet  $\leq 240.7 \times 10^9/L$  (8/18, 44.4%) compared with that in other patients (4/31, 12.9%,  $P=0.018$ )
  - **OR=2**, 95%CI 0.55-7.33
  - **N=49**

## 用药时间

independent risk factor for severe thrombocytopenia

- Drug instruction
    - the recommended duration : 10-14 days
    - Gerson SL et al. -prolonged use of linezolid (> 14 d) has increased the risk of thrombocytopenia 2.9% (36/1243) to 4.1% (19/461)
  - ROC cut-off point (Criterion 1) :10 days
- 
- confirmed the findings of reports& drug instruction
  - longer treatment need more clinical blood tests

## 肌苷清除率

Higher incidence in the group with severe renal impairment

- Creatinine clearance as the indicator of renal function
    - the ROC cut-off point (Criterion 2)  
creatinine clearance  $\leq 88.39$  mL/min
  - Mild PLT decrease may occur when creatinine clearance rate is at its lower limit, while there is still no sign of renal insufficiency.
  - Ccr $\leq 30$  severe renal impairment (48% [15/31] vs. 24% [54/222],  $P=0.005$ , **OR=2.92** 95%CI 1.39-6.14)
- 
- Wu VC et al. A retrospective case-control study
    - Two groups: end-stage or non-end-stage renal diseases
    - incidence of thrombocytopenia is higher in the group with **end-stage renal disease**
  - Brier et al. the clinical significance of accumulation of two metabolites
    - PNU-142586
    - PMU-142300

Wu VC et al. Clin Infect Dis 2006; 42: 66-72.  
 Brier et al. Antimicrob Agents Chemother 2003; 47: 2775-80.

## 结 论

- **Situation in Chinese patients**
  - actual incidence is much higher than in drug instructions
  - hemorrhagic tendency
- **Risk factors**
  - low pre-treatment platelet values
  - low body weight
  - low serum albumin
  - long time of administration
  - Advanced age
  - renal impairment
- **Predictors**
  - baseline platelet  $\leq 181 \times 10^9/L$
  - daily dose  $\geq 18.75$  mg/kg
  - duration of linezolid therapy  $\geq 10$  d
- **Strategy**
  - strengthen monitoring frequency according to risk factors
  - dosage adjustment according to body weight(PK/PD)

*Thank you for your attention*
